

Mohamed Outerbah

Full-Stack Engineer · Next.js · React · React Native · Node.js · Express · Python

Algeria (Remote) · Open to Contracts & Full-Time Remote | mohamedterba6@gmail.com · mohamedouterbah.com ·
github.com/Mohamed-gp · linkedin.com/in/mohamedouterbah

Full-Stack Engineer with 3+ years delivering production web & mobile applications. Core engineer on AI analytics SaaS and logistics marketplace. Co-founded e-commerce platform that reached 151 stores organically in 2 months. Specialized in Next.js, React Native, AI integrations, and scalable systems.

EXPERIENCE

Analytics Depot — Full-Stack Engineer · AI SaaS, USA · Remote

Apr 2025 – Present

- Core engineer and 2nd-highest contributor (**120+ commits**) on a live AI analytics platform, across a ~10-person team (AI/ML, LLMOps, NL-to-SQL, infra).
- Dashboards & reporting:** Built the custom drag-and-drop dashboard builder and shareable reporting system — password-protected and embed-mode reports with one-click PDF/PowerPoint export.
- Real-time collaboration:** Shipped WebSocket session sync, live user-presence, and a collaborative chat sidebar (production wss:// handling), plus a natural-language-to-SQL query interface.
- Data connectors:** Built an OAuth2 connector platform with encrypted credential storage spanning 10+ data sources — BigQuery, Google Analytics 4, Search Console, Google Sheets, Gmail, YouTube, Google Play, PostgreSQL, MySQL, and Slack.
- AI / RAG:** Delivered RAG document-intelligence Q&A with resilient streaming, soft-delete tombstones, multi-format ingestion (CSV/PDF/Excel/images), and a Gemini model layer with fallback.
- Async & scale:** Implemented Redis caching and Celery task queues for async jobs, scheduled reports, a threshold-alert builder, and data-source auto-refresh.
- Auth & DevOps:** Built RBAC (Admin/Expert/User) with Apple + Google auth and rate limiting; cut deploy time from ~30 min to under 5 min; hardened CI/CD (GitHub Actions, PM2), idempotent Alembic migrations with fail-on-error rollback, and Sentry observability.
- Mobile:** Initialized the companion React Native app — dashboard viewing, push notifications, biometric auth, offline caching.

HaulHub — Full-Stack Engineer (Contract) · Logistics Marketplace, Netherlands · Remote

Jun 2025 – May 2026

- Full-stack engineer (**380+ commits** across backend, mobile, web) on a production Uber-style logistics marketplace — live on iOS & Android in the Netherlands across 12 service categories (truck & equipment rental, towing, furniture transport, logistics, agriculture) with 100+ skilled-labor sub-categories.
- Multi-role architecture:** Built a role-based permission system across 5+ user types — Admin (with sub-roles), End Users, Service Providers (freelancers & companies), and Company Employees — each with dedicated dashboards and scopes.
- Core services:** Built the platform's two most complex services end-to-end: booking flows, real-time tracking, provider matching, and status management.
- Payments:** Integrated Stripe with hardened raw-body webhook signature verification — on-demand, subscriptions, and provider payouts.
- Compliance & fleet:** Built fleet-company and employee flows, skilled-labor approval, vehicle/image management, and Dutch KVK business-registry lookup.
- Mobile:** Shipped the React Native (Expo) app to the App Store via EAS builds — push notifications, full RTL i18n across 5 languages (English, Dutch, Arabic, German, Urdu), real-time chat, and map directions.
- Infra:** Deployed Dockerized microservices on Hetzner via Coolify; hardened CORS; integrated Sentry and Microsoft Clarity.

Freelance — Full-Stack Developer · Global · Remote

Jun 2023 – Jun 2025

- Delivered 6+ production applications for clients in the UK, USA, Netherlands, Japan, and Saudi Arabia. **5/5 rating across delivered projects.**
- Cribbix (UK):** Built a Rightmove-style property rental & sales platform (V1 & V2) — interactive map search with full filtering, client/agency/admin dashboards, renter profiles, real-time chat, AI-generated property descriptions, and Stripe tenancy payments. Added Redis caching, rate limiting, and reCAPTCHA v3; migrated to Next.js 15 + React 18 and ran full VPS deployment on DigitalOcean independently.
- MLC SharePoint to Zoho CRM Sync:** Built a zero-framework Cloudflare Worker that watches a SharePoint contract library and auto-updates matching Zoho CRM accounts (NDA/MSA detection), notifying account managers via SendGrid — with a deliberate "never auto-fill legal dates" safeguard.

- Built a course management system (Next.js + Express) with role-based auth for students, instructors, and admins.

PROJECTS

DzStore — Shopify-equivalent e-commerce SaaS · Co-Founder & Full-Stack Engineer

- Co-founded a multi-tenant e-commerce SaaS and worked across its full stack — **database, backend, and frontend**. Reached **151 active stores, 253 users, and 190+ products in its first 2 months — 100% organic SEO, zero ad spend** (pre-revenue).
- **Multi-tenancy & infra:** Subdomain-per-store routing (Next.js middleware) with Caddy on-demand TLS for merchant custom domains; a 38-model Prisma/PostgreSQL schema; self-hosted on Hetzner via Docker with a cron sidecar and Upstash Redis caching/rate-limiting.
- **Commerce:** Drag-and-drop storefront builder with themes, product/variant management, per-region (wilaya/commune) shipping, discount codes, abandoned-cart recovery with lifecycle emails (Resend), and an affiliate system with payouts.
- **Platform:** Better-Auth with email verification, AI product-listing & description generation, customer fraud flagging, merchant SEO controls, full Arabic/French RTL (next-intl), and self-hosted Umami analytics.
- **SEO & organic growth:** Owned technical SEO for the marketplace (dzstore.org/discover) — structured data (FAQ, breadcrumbs, product & merchant schema for Google Shopping / rich results) and 130+ pages indexed — powering the platform's 100% organic merchant and buyer acquisition (zero ad spend).

Khdame — CRM & marketplace for retail stores · Co-Founder & Full-Stack Developer

- Co-founded a CRM suite (desktop web + Android/Expo) with an integrated marketplace, real-time stock/inventory management, push notifications, WebSocket infrastructure, a stats dashboard, OTP verification, Google Auth, and Play Store submission.

Munia — Open-source social media · Contributor · 300+ GitHub stars

- Contributed auth-aware navigation and dynamic UI logic to a Next.js open-source project.

EDUCATION

Master's in Computer Science — ESTIN, Algeria

Expected 2027

- **Hackathon Winner 2024** — 1st place, competitive ideathon · 5+ hackathons participated.

TECHNICAL SKILLS

Frontend	React, Next.js (App & Pages Router), TypeScript, JavaScript ES6+, Tailwind CSS, Redux Toolkit
Mobile	React Native (Expo) — iOS & Android, EAS builds, push notifications, biometric auth, RTL i18n
Backend	Node.js, NestJS, Express.js, FastAPI, Python, REST APIs, WebSockets, RBAC
Databases	PostgreSQL, Prisma ORM, Redis, MongoDB
DevOps	Docker, GitHub Actions, CI/CD, VPS (Hetzner, DigitalOcean), Coolify, Caddy/Nginx, PM2, Cloudflare Workers
Integrations	Stripe, OAuth2, Apple/Google Auth, Zoho CRM, SharePoint, Google Maps, reCAPTCHA, Turnstile, SendGrid/Resend, Sentry, Umami
AI / SaaS	RAG systems, LangChain, NL-to-SQL, Gemini, Celery task queues, real-time collaboration, drag-and-drop builders
