

Mohamed Outerbah

Full-Stack Engineer · Next.js · React · React Native · Node.js · Express · TypeScript

Algeria · CET (UTC+1) · mohamedterba6@gmail.com · mohamedouterbah.com · github.com/Mohamed-gp ·
linkedin.com/in/mohamedouterbah

Full-Stack Engineer with 3+ years shipping production web & mobile platforms end-to-end. Own the entire frontend of a live AI analytics SaaS as 2nd-highest contributor in a ~10-person team, and built the on-demand dispatch and fleet-operations services of a live Uber-style logistics marketplace. Co-founder of DzStore, a Shopify-equivalent SaaS that grew to 1,000+ live stores in its first 3 months live, 25+ of them converting to paid plans, and Fibble, a multiplayer party game on web and Discord with 3,000+ players, both entirely organic with zero ad spend.

EXPERIENCE

Full-Stack Engineer (Frontend Lead) · Analytics Depot (AI Analytics SaaS), USA · Remote Apr 2025 - Present

- Build every user-facing surface of a live AI analytics platform in TypeScript, JavaScript, React, HTML, and CSS, from analytics dashboards to the marketing site, so non-technical business teams can explore their data and act on it without engineering help.
- **Dashboards & reporting:** Designed and implemented the drag-and-drop dashboard builder, shareable password-protected/embed reports, and one-click PDF/PowerPoint export UI.
- **Real-time collaboration:** Shipped WebSocket session sync, user presence, and a collaborative chat sidebar over production wss://, plus the NL-to-SQL query interface.
- **Data connectors:** Developed an OAuth2 connector platform with encrypted credential storage spanning 10+ sources (BigQuery, GA4, Search Console, Sheets, Gmail, YouTube, Google Play, PostgreSQL, MySQL, Slack), including per-connector refresh schedules taken end-to-end (React UI, FastAPI/Python, Celery Beat) and in-app alerts that tell a user the moment a sync starts failing.
- **AI / RAG:** Delivered RAG document-intelligence Q&A with resilient streaming, multi-format ingestion (CSV/PDF/Excel/images), and a Gemini model layer with fallback.
- **LLM agent observability:** Instrumented AI agent runs with an admin console over the trace pipeline: run volume and reliability trends, per-run latency and provider-cost drill-down into spans, cost-regression flags, recovered failures broken out from real ones, and async CSV/JSON export of the query log.
- **Growth & DevOps:** Rebuilt the full marketing site (animated hero, comparison, FAQ); cut deploy time from ~30 min to under 5 with zero-downtime PM2 cluster reloads; hardened CI/CD (GitHub Actions) with Sentry observability, working Agile in a cross-functional ~10-person team of AI/ML, LLMops, and infra engineers; PKCE OAuth and Apple "Hide My Email" auth.
- **Mobile:** Initialized the companion React Native app: dashboard viewing, push notifications, biometric auth, offline caching.

Full-Stack Engineer (Contract) · HaulHub (Logistics Marketplace), Netherlands · Remote Jun 2025 - May 2026

- One of the primary engineers across backend, mobile & web on a production Uber-style marketplace, live on iOS & Android in the Netherlands across 12 service categories and 100+ skilled-labor sub-categories, localized in 5 languages (EN/NL/AR/DE/UR) with full RTL.
- **On-demand dispatch service:** Engineered the request-to-delivery flow end-to-end: nearest-provider matching with the Haversine formula and per-provider search radius, competing provider offers with price and pickup-time bids, an 11-state request lifecycle with proof-of-delivery and disputes, live driver tracking over per-ride WebSocket rooms, and Stripe escrow with timing-based cancellation refunds.
- **Fleet-operations service:** Developed the B2B fleet module, the platform's largest: companies manage drivers, vehicles, and workers, accept marketplace requests, and assign each trip to a specific driver and vehicle, backed by a settlement engine that splits every job into company commission and driver earnings.
- **Multi-role architecture:** Architected a role-based permission system across 5+ user types (Admin with sub-roles, End Users, freelance & company Service Providers, Company Employees), each with dedicated dashboards.
- **Payments & compliance:** Integrated Stripe with hardened webhook signature verification (on-demand, subscriptions, provider payouts) and Dutch KVK business-registry lookup.
- **Mobile & infra:** Shipped the React Native (Expo) app via EAS builds with push notifications, real-time chat, and map directions; Dockerized microservices on Hetzner via Coolify with Sentry + Clarity.

Freelance Full-Stack Developer · Global clients · Remote Jun 2023 - Jun 2025

- Delivered 6+ production applications for clients in the UK, USA, Netherlands, Japan, and Saudi Arabia, with a **5/5 rating on every client project** (Fiverr).
- **Cribbix (UK):** Rightmove-style property platform (V1 & V2): interactive map search with instant filtering, client/agency/admin dashboards, real-time chat, AI property descriptions, Stripe tenancy payments, Redis caching, and independent DigitalOcean VPS deployment.
- **MLC SharePoint to Zoho sync:** Zero-framework Cloudflare Worker watching a SharePoint contract library and auto-updating Zoho CRM (NDA/MSA detection) with SendGrid notifications.

Web Development Intern · Exclusive Labs · Remote Sep - Dec 2024

- Created a course management system (Next.js + Express) with role-based auth for students, instructors, and admins.

FOUNDER PROJECTS

DzStore · Shopify-equivalent E-commerce SaaS · Co-Founder & Lead Engineer · dzstore.org Jun 2025 - Present

- **Traction:** Reached 1,000+ active stores, 2,100+ products, 550+ orders, and 5.5M+ DZD in merchant sales (GMV) in the first 3 months since the May 2026 launch, on 47,000+ visitors and 166,000+ pageviews, still adding ~120 new stores a week with new stores up 55% and orders up 190% month over month, 100% organic with zero ad spend, and **25+ merchants upgraded to paid PRO plans, acquired through SEO alone.**
- **Quality signals:** 4.7/5 average across 73 in-app merchant survey responses; 99.95% uptime over the last 90 days with zero recorded incidents (public status page: status.dzstore.org).
- **Organic SEO engine:** Owned technical SEO end-to-end: 15,000+ pages indexed, 600+ valid product snippets & merchant listings (Google Shopping rich results), a Google Merchant Center feed with 2,000+ products, Meta Pixel integration, and breadcrumb/FAQ structured data, now pulling 3,000+ Google Search clicks and 100,000+ impressions a month, and effectively every merchant signup (search out-refers social 12:1 on the signup funnel).
- **Merchant mobile app:** Launched an iOS/Android app (React Native + Expo) for store owners: real-time order tracking, push notifications for new orders, stock management, and a multilingual UI with Arabic RTL.
- **Engineering:** Led nearly all engineering across the stack: multi-tenant subdomain-per-store routing with Caddy on-demand TLS for custom domains, a 44-model Prisma/PostgreSQL schema, drag-and-drop storefront builder, online card payments (Chargily Pay) with HMAC-verified webhooks, per-region shipping rates plus a carrier layer wrapping 70 Algerian delivery companies behind 5 API adapters (tariff import, shipment creation, tracking), abandoned-cart lifecycle emails (Resend), affiliate payouts, AI product descriptions, and Arabic/French RTL; self-hosted on Hetzner via Docker with zero-downtime deploys and Upstash Redis.
- **Revenue protection:** Noticed free merchants with heavy order volume were not upgrading, audited the free-plan order cap end to end, and found customer contact details bypassing it through 8 server-side channels (order detail API, CSV and carrier exports, email, WhatsApp and push alerts, Google Sheets webhook, customers list); closed every leak behind a single order-privacy module, pinned by regression tests that scan whole payloads for raw customer data.
- **Cost engineering:** Migrated the production PostgreSQL from Neon to Supabase with pg_dump/pg_restore at zero downtime, and made the image-optimizer cache survive deploys, cutting the database bill by 50%+ and retiring ~17 GB/month of Cloudinary egress.

Fibble · Multiplayer Party Game (Web + Discord) · Co-Founder & Full-Stack Engineer · fibble.io Sep 2025 - Present

- **Product:** Free real-time bluffing trivia game (2-8 players, no download) playable in the browser and as a Discord Activity, with a premium subscription tier.
- **Traction:** 3,000+ players in 80+ countries across 2,200+ games played in the first 3 months since launch, entirely organic with zero ad spend, converting its first paying subscribers on both billing rails.
- **Engineering:** Serverless real-time multiplayer: Postgres as the source of truth with Ably pub/sub fan-out, server-authoritative phase deadlines, and HMAC anti-spoofing action tokens; plus Discord Activity integration, Paddle + Discord SKU billing, and a full admin analytics panel (player geo, sessions, retention, moderation).

EDUCATION & AWARDS

Master's in Computer Science, AI & Data Science specialization, ESTIN, Algeria Expected 2027

- **Hackathon Winner 2024:** 1st place, competitive ideathon · 5+ hackathons participated.
- **Open-source contributor:** Munia, a Next.js social platform with 300+ GitHub stars (auth-aware navigation and UI logic).

TECHNICAL SKILLS

Frontend	React, Next.js (App & Pages Router), TypeScript, JavaScript ES6+, HTML5, CSS3, Tailwind CSS, Redux Toolkit
Mobile	React Native (Expo) for iOS & Android: EAS builds, push notifications, biometric auth, RTL i18n
Backend	Node.js, NestJS, Express.js, FastAPI, Python, REST APIs, WebSockets, Ably, RBAC
Databases	PostgreSQL, MySQL, SQL, Prisma ORM, Supabase, Redis, MongoDB
Cloud	Google Cloud (BigQuery), Microsoft Azure, Cloudflare, Hetzner, DigitalOcean
DevOps & Practices	Docker, Git, GitHub Actions, CI/CD, Agile, Coolify, Caddy/Nginx, PM2, Claude Code (AI-assisted dev)
Integrations & AI	Stripe, Paddle, online payments (Chargily Pay), OAuth2 (PKCE), Apple/Google Auth, Sentry, SendGrid/Resend, PostHog, RAG systems, LangChain, NL-to-SQL, Celery, real-time collaboration
